

The first integrated diagnosis and tumour management system for bronchoscopists.

It's a **unique combination** of three innovative technologies covering **all endoscopic procedures** for early recognition and correct staging of bronchial carcinomas:

SAFE-3000: New diagnostic precision through combination of digital video and autofluorescence technologies!

NEW! Full video EBUSpro: For the first time highest digital video image resolution combined with high-resolution ultrasound imaging!

High-resolution EUS: The ideal complementary technology for EBUSpro through highest digital video and ultrasound resolution!

Providing bronchoscopists with a new level of precision and visual accuracy:

Superior full digital video technology for highest resolution in ultrasound and endoscopic imaging.

EBUS TBNA perfects lymph node and tumour diagnosis and staging.

Surgical procedures such as **mediastinoscopy** can be **partially replaced** and risk of complications reduced.
